

In Collaboration with GAS TURBINE CONTROLS INC U.S.A.

ENMAS
INDIA

Now Offers Parts, Repairs, Field Services and Training for GE GAS TURBINE CONTROLS

Areas of expertise include current, prior and discontinued versions of systems including:

Turbine Control, Excitation, Speedronics, Vibration Monitoring, (Bently Nevada) Generator Protection:

Global Solutions for Gas and Steam Turbine Operators

Replacement Parts

GTC maintains an unparalleled inventory of replacement parts for the systems declared obsolete or at end-of-life by the OEM, as well as the current ones. Our clients have access to genuine, tested and warranted spares with personalized service and expedited delivery in case of forced outage or emergency. Our remanufactured, ready-to-go components save time, money and can provide unrivaled warranty terms under our Warranty XXL program.

Reman™

GTC has developed the Reman process. The proactive replacement of known-to-fail components improves the life expectancy of the cards beyond the OEM's design.

GTC's Reman cards mitigate the risk of in-service failures. To prove it, GTC offers for its Reman cards a longer warranty period than for new/unused cards. Ask your Regional Sales Representative about Reman cards. Reman is available for select Speedtronic models.
